

Guide: Access AWS EC2 server from MacBook

Download pem File in Download Directory

Open terminal app in mac book

1. Provide Permission for pem file

```
# cd Download
```

```
# chmod 600 elv.pem
```

2. Connect to EC2

```
# ssh -i elv.pem ubuntu@3.110.131.95
```

- First time: type `yes` when asked.
- Replace `ubuntu` with correct username for your AMI.

After Login you are land in Ubuntu user

Going to root user

```
# sudo -i
```

3. Stop/Start Server

- If you don't need the server for more than 2 hours, **stop it** to save usage:

```
# sudo shutdown -h now
```

< with ubuntu user

```
# shutdown -h now
```

< with root user

- You can start it again anytime from the **AWS EC2 Management Console**.

AWS Free Tier Limits
